Interpres Threat Exposure Management
Optimize Your Defenses to Combat The Threats That Matter Most

Security has become overly complex and it’s only getting worse.
We need to go back to the fundamentals and do this efficiently and cost-effectively. Start with good, timely, threat data. It’s about the quality of TTP-based threat intelligence and the ability to action it. We can’t solve this problem with IOCs, a platform, or with disparate and siloed products. We need to capture quantifiable data to make fact-based decisions. Those decisions need to start with Who, How, Why and Where those adversaries are attacking and how the defenses measure up.

Reduce cyber threat exposure. Protect critical assets. Streamline your defenses.
The Interpres Threat Exposure Management Platform’s threat model begins by analyzing your organization’s unique threat profile based on industry, systems in use, protected data and much more. We then baseline your specific defensive capabilities and call-out the strengths and weaknesses. Next, Interpres compares your capabilities against the adversarial TTPs and critical vulnerabilities that will most likely be used to attack your organization, visualized via a battle map with prioritized recommended actions. Finally, we deliver a bespoke threat model and continuously optimize your security stack to defend against the threats that matter most.

This cycle continues automatically to ensure you are always ahead of the latest adversarial groups and their TTPs. With continuous threat monitoring, organizations can reduce the amount of time it takes to identify new and emerging threats and quickly take steps to mitigate them before an attack occurs. Interpres enables a proactive security capability. No more spreadsheets. No more guesswork. Only quantitative data required for evidence-based actions to ensure the protection of critical assets against the ever-evolving threat landscape.
Outcomes of Intelligence-Led Threat Exposure Management

**Defense Readiness**
Focus readiness and relationships on the most likely threats targeting your organization first.

**Prioritized Vulnerability Intelligence**
Prioritize exploitable vulnerabilities being leveraged by adversaries that target organizations like yours.

**Defense Surface Optimization**
Ensure your detective and preventive controls match the threats targeting you and your controls accurately reflect your strategy.

**Stack & Product Rationalization**
Identify over investment and under investment.

Cybersecurity is broken

Lack of visibility, missing detections, misconfigurations, control gaps and environmental drift (security entropy) happens every day creating more opportunities for the bad actors to be successful. Many are dealing with a false sense of security, and most everyone knows it. Cyber threat intelligence is not living up to its promise. Not because of the quality of the content, but rather the ability of organizations to apply it.

Operationalizing threat intelligence is spreadsheet-driven and time-consuming. What is needed is the ability to operationalize TTP-based intelligence and fuse it across your defensive ecosystem to make sense of the defensive posture, measure effectiveness, identify control gaps, and determine ROI.

About Interpres

Interpres Security brings context and evidence of security performance with a comprehensive new perspective to managing threat exposure. In today’s rapidly changing threat environment, CISO’s and security teams need a data-driven and threat-informed approach to measure Defensive Readiness that is rapid, scalable, and automated replacing lengthy and manual processes. They need to understand what current controls can detect and defend against, identify gaps, deficiencies, and misconfigurations to optimize the security stack and maximize investments.

Interpres focuses on the dynamic relationship between the defense surface, adversarial TTPs and exploitable vulnerabilities that will likely be used to attack an organization. Using continuous situational awareness, organizations know exactly how well they are prepared for existing and breaking events, with prioritized and recommended actions to mitigate gaps in defensive coverage. Interpres Security is backed by a top cybersecurity specialist investor, Ten Eleven Ventures.
