Interpres Defense Surface Management

Optimize security investments to combat the threats that matter most

- Do you know the control gaps in your security strategy?

- Do you know how well your security stack is detecting your adversaries?

- Can you operationalize Tactics, Techniques & Procedures (TTP) based threat intelligence?

Interpres is a threat-informed defense surface management platform that operationalizes and fuses prioritized adversarial tactics, techniques and procedures with your unique threat profile, your unique security stack, and TTP-based threat intelligence to identify coverage gaps, prioritize actions, optimize your defenses and reduce risk.

TTP-based threat intelligence is a gold mine of information if aligned across industry sector, threat profile and security stack. A threat-based approach provides insights into an adversary's desired targets, methods of compromise and means to meet their goals. However, it is difficult to operationalize because extracting the relevant data is labor intensive; requiring hundreds of man-hours to map techniques to individual security controls, test configurations and identify gaps.

Further complicating the issue is the prioritization and synchronization required across security engineers, analysts and operators to maintain continuous optimization across your security stack.

How it Works

Interpres produces a continuous, threat-informed view of your entire defense surface by merging, analyzing and optimizing preventative controls, configurations, telemetry, detections and mitigations with TTP-based threat intelligence to show where adversaries will most likely attack.

This Interpres output is contextualized through the MITRE ATT&CK® framework providing prioritized and actionable recommendations to harden your security posture and enable data-driven decision making.

The agentless approach of the Interpres threat-informed defense surface management solution seamlessly connects to existing security products within your environment to optimize your defensive surface capabilities, resulting in low drag, high impact results.

Interpres automates and operationalizes TTP-based threat intelligence and fuses it with your unique threat profile and your unique security stack so you can tailor defenses for the most prevalent threats targeting your organization to reduce risk.

Chaos to Clarity

Interpres automates defense surface management and optimizes security investments to provide teams with a comprehensive platform for better decision making. The platform helps organizations reduce risk by identifying which adversaries pose the greatest threat and how they may attempt to compromise security controls. Security teams can use defensive action and detection coverage efficacy recommendations to counter the most likely attacks based on a unique threat profile.

With the Interpres threat-informed defense surface management platform, organizations get:

Crisp visibility
Gain a holistic view of your security stack's detection capabilities to rapidly diagnose threats

Efficacy of security controls
Identify coverage gaps of missing, redundant and underperforming controls

Optimized outcomes
Focus resources on prioritized and relevant threats, not distractions

Validation of security strategy
Through a threat informed and evidence-based methodology

About Interpres

Interpres Security makes security performance intelligible and provable for the enterprise with a comprehensive new approach to managing the defense surface. With Interpres, security teams can take a threat-informed perspective to understand what their current tools can detect and defend against, identify gaps and inefficiencies, and iteratively improve their security posture with a data-driven and custom-tailored approach. Interpres Security is backed by top cybersecurity specialist investor, Ten Eleven Ventures.
